CIM BASERET EDIEL TRANSAKTIONER FOR DET DANSKE ELMARKED VERSION 1.6

GUIDE

Dette dokument indeholder RSM Guiden til CIM formatet

Dele af DataHub 3.0 er ikke 100% klarlagt endnu, hvorfor der kan komme løbende opdateringer til dokumentet, hvor udvikling eller test viser fejl eller mangler.

REV.	DESCRIPTION	01-10-2021	07-01-2022	09-03-2022		DATE

1 Ændringslog

Version	RSM-Nummer	Afsnit	Rettelse
0.1	Alle	-	Dokument oprettet
0.2	Alle	Alle	Strukturen i kolonnen Danish attribut er blevet tilpasset, så attribut vises i samlet felt i stedet for niveauer
0.2	Alle	Alle	Kolonne til felt længde tilføjet
1.0	Alle	Alle	ALLE RSM har fået tilføjet et header afsnit
1.0	Alle	Alle	Mange steder er der tilføjet ekstra informationer til attributter, som format eksempler m.m.
1.0	-	8	Opdateret med de seneste ændring
1.1	Overskrift		Ændret
1.1	RSM-006	6.5.2.3	Documentnamecode ændret
1.1	RSM-009	6.6.3	Header information tilføjet
1.1	RSM-012	6.7.4	Documentnamecode ændret
1.1	RSM-016	6.10.1.3	Documentnamecode ændret
1.1	RSM-018	6.13.2.3	Documentnamecode ændret
1.1	RSM-020	6.15.1.3	Documentnamecode ændret, BusinessReasonCode ændret
1.1	RSM-020	6.15.2.3	BusinessReasonCode ændret
1.1	RSM-020	6.15.3.3	BusinessReasonCode ændret
1.1	RSM-024	6.19.1.3	Documentnamecode ændret
1.1	RSM-005 RSM-020 RSM-020 RSM-024 RMS-027 RMS-030 RSM-033	6.4.2 6.15.2 6.16.2 6.19.2 6.21.2 6.24.2 6.27.3	Bemærkning fjernet for Reason code
1.1	Mange	Mange	I alle mappings tabeler hvor der har være henvist til GLN..11 er cifre rettet til 13. Derudover er info om GLN og EIC rykket til kommtarer feltet i stedet for længde feltet.
1.1	Mange	-	Mange Contextual og assembly modeller er opdateret grundet tilføjelse af default værdi documentnamecode, så den vises korrekt i modellerne.
1.1	Flere	-	Flere Contextual og assembly modeller har ikke afspejlet cardinaliteterne beskevet mapningstabellen. Dette er nu rettet i modellerne, der er ikke ændret på cardinaliteterne i mapningstabellerne.
1.1	RSM-014	6.8	NotifyAggregatedtimeseries har skiftet navn til NotifyAggregatedmeasurData

1.1	RSM-005	6.4.2	Cardinalitet for MP er ændret til mandatory
1.1	RSM-021 RSM-022	6.16.1.5 6.17.4	Dansk attribut og længde ændret for ActualAddressIndicator
1.2	RSM-017 RSM-033	6.27.2 6.11.1	Længde ændret for attribut "Resolution"
1.2	RSM-034	6.28.1 6.28.2	ChargeGroup har fået fjernet mRID i modellerne
1.2	RSM-027 RSM-028	6.21.1.5 6.22.4	Struktur er ændret for Phone felter i CIM kolonnen fra /phone1 eller 2 til /ituphone/phone 1 eller 2 Længden er ændret fra 20 til 15
1.2	RSM-019	6.14.4	Længde felt er ændret fra An..6 til Decimal for amount og quantity
1.2	Mange reject og confirm beskedes	Mange	Da der er taget beslutning om at bruge A01 og A02 bruges i Reject og confirm beskedes i CIM, er bemærkning om at beslutning udestår fjernet i hele dokument.
1.2	Mange	Mange	Længde for "ChargeTypeOwner_MarketParticipant / mRID" er ændret fra An..50 til An..16
1.2	RSM-033 RMS-034	6.27.2 6.28.4	Bemærkning om ændret brug af VatPayer, er fjernet, da der ikke er ændringer til brug af VatPayer.
1.2	RSM-033	6.27.3.1	Contextual model til Confirm er sat ind, da request var blevet kopieret ind ved en fejl.
1.2	RSM-021	6.16.1.5	Dansk attribut rettet for Linked_MarketEvaluationPoint
1.2	RSM-009	6.6.4	Mapping tabel er blevet rettet så navngivning mellem Danish attribut passer med CIM attribute
1.2	RSM-016		DocumentnameCode er blevet rettet fra E66 til E74 for request
1.2	RSM-028	6.22.4	Struktur rettet for Occurrence
1.2	RSM-001 RSM-027 RSM-028		Indsat kommentar vedr. CPR og CVR, for hvordan man sletter CPR og CVR
1.2	RSM-020	6.15.1 6.15.2	Ændring af struktur for ServiceCatagory fra electricheating til kind i modellerne
1.3			Ny version, efter Christian Odsgard har gennemført et review, hvor noter er blevet tilføjet eller præciseret.
1.3	Alle	Header afsnit	Alle header afsnit er gennemgået for at sikre at alle roller og forretningsårsager er vist korrekt.
1.3	RSM-033 RSM-034		Forretningsårsag D18 er omdøbt Forretningsårsag D08 tilføjet
1.3	RSM-035		Forretningsårsag D48 tilføjet
1.3		7	Koden Z01 er ændret til A06

1.3	RSM-012 RSM-014 RSM-019 RSM-033 RSM-034	6.7.5 6.8.4 6.14.4 6.27.2 6.28.4	Beskrivelsen til timeinterval er ændret, så formatet fremstår uden sekunder, som ikke bruges i de RSM, hvor der bruges time interval.
1.3	RSM-030 RSM-031		Der er kommet kommentarer til disse to RSM, som kan medføre ændringer i strukturen, hvorfor de to RSM ikke færdige endnu.
1.4	RSM-021 RSM-022	6.16.1.15 6.17.4	physicalConnectionCapacity, contractedConnectionCapacity og ratedCurrent har fået tilføjet bemærkning om at unit er et krav i transaktionen
1.4	RSM-021 RSM-022	6.16.1.15 6.17.4	Format til nextreading i dokumentation er rettet så det passer med formatet i skemaerne.
1.4	RSM-033	6.27.1.4	Series_period er taget ud af CIM attribut til PriceTimeFrame_Period / resolution
1.4	RSM-003	6.2.1.4 6.2.2.4 6.2.3.4	Afsender og modtager i RSM-003 transaktioner er blevet byttet om så de passer med processen.
1.4	RSM-030	6.24.1.1 6.24.1.2	Modeller opdateret så de viser den nye attribut sammenhæng
1.4	RSM-030	6.24.1.4	Attribut Start_DateAndOrTime og End_DateAndOrTime er blevet fjernet. Attribut effectiveDate og terminationDate er blevet tilføjet. Kardinalitet for Chargegroup er ændret fra 1..1 til 1..*
1.4	RSM-031	6.25.1 6.25.2	Modeller opdateret så de viser den nye attribut sammenhæng
1.4	RSM-031	6.25.4	Attribut Start_DateAndOrTime og End_DateAndOrTime er blevet fjernet. Attribut effectiveDate og terminationDate er blevet tilføjet.
1.5	RSM-001		Afsnit er opdateret med data fra RSM DH2 dokument og omskrevet så rækkefølgen passer sammen.
1.6	RSM-014 RSM-016 RSM-017 RMS-019		Disse 4 RSM er blevet flyttet til Confluence EDI transaktioner for danske elmarkede (RSM-Guide) - DataHub Docs & DX - Confluence (atlassian.net)

3 Introduktion

Denne bilagsrapport beskriver den samling af forretningstransaktioner, der indgår i dokumentet "Forretningsprocesser for det danske elmarked".

Bilagsrapporten indeholder en specifikation af håndteringen af forretningstransaktionerne der bliver anvendt i det danske elmarked.

En forretningstransaktion i dette dokument skal håndteres med udgangspunkt i reglerne, som er angivet i afsnit om *Fejlhåndtering og kvitteringer*, der beskriver den generelle fejlhåndtering, hvilket omfatter den validering af meddelelserne, som skal ske før den mere specifikke validering af forretningstransaktion.

3.1 Formål og målgruppe

Dokumentet har til formål at klarlægge og beskrive forretningstransaktionerne samt indholdet af data for de beskrevne forretningsprocesser. Dokumentets målgruppe er alle aktører og disses systemleverandører.

3.2 Forretningstransaktioner

En forretningstransaktion er uafhængig af andre forretningstransaktioner, men kan sammen med andre transaktioner indgå i en eller flere forretningsprocesser.

En forretningstransaktion beskriver udvekslingen af meddelelser mellem to aktørers it-systemer. Yderligere specificeres en del af den interne håndtering i en aktørs it-system.

Ved modtagelse af en meddelelse skal det valideres om den er i overensstemmelse med de forretningsregler der er angivet i *Forretningsprocesser for det danske elmarked*, hvorefter svar afsendes.

Hver meddelelse indeholder en liste af attributter, som vises i form af et klassesdiagram og i enkelte tilfælde anvendes en dependency matrix. En dependency matrix anvendes, hvis det er muligt at sende en meddelelse med forskellige attributter alt efter formål.

Dette dokument beskriver således alle forretningstransaktioner, der indgår i dokumentet: *Forretningsprocesser for det danske elmarked*.

3.3 Beskrivelse af meddelelsesstruktur

Den strukturelle definition af de enkelte meddelelser er dels beskrevet tekstuel i dette dokument, dels specificeret ved hjælp af en række XML-skemaer, som kan hentes på Energinets hjemmeside.

På grund af tekniske begrænsninger i syntaksen for XML/JSON-skemaer er der situationer, hvor attributter vil være angivet som valgfri, på trods af at de logisk vil være krævet et sted i meddelelsen og valgfri eller endog ikke tilladt et andet sted. Dette fremkommer når samme datatype anvendes i samme meddelelse, men i lidt forskellig kontekst. I disse tilfælde vil afhængigheden for den enkelte instans af en attribut som beskrevet her i dokumentet være den gældende og den som DataHub validerer efter.

Eks. Next reading date skal være på NG6 målepunkter, men ikke på øvrige målepunkter

Eks. Netsettlementgroup – kun forbrugs- og produktionsmålepunkter (E17 og E18) har angivet nettoafregningsgruppe. Øvrige målepunktstyper har ikke angivet nettoafregningsgruppe.

3.3.1 Læsevejledning

De enkelte RSM er beskrevet ud fra den generelle IEC standard, hvorfor der vil være en række attributter, som ikke bruges i Danmark. Attributter der ikke bruges, vil ikke have noget navn i kolonnen "Danish attribute" og ofte vil der også være en bemærkning i kolonnen "Remark" som viser at der ikke bruges i Danmark.

Danish attribute	Card	CIM attribute	Længde	Card.	Remark
Payload Response Event / Status Type	1	ConfirmRequestChangeOfSupplier Market-Document / Reason /code	AN..3 Kode	1	A01 Message fully accepted)
Payload Response Event / Identification	1	MktActivityRecord / mRID	An..36	1	Afsenders unikke identifikation af transaktionen Transaktion ID svarer til Tidsserie ID
		MktActivityRecord / BusinessProcessReference MktActivityRecord / mRID	An..36	0..1	Currently not used in Denmark.
Payload Response Event / Original Business Document	1	MktActivityRecord / OriginalTransactionIDReference MktActivityRecord / mRID	An..36	0..1	Entydig reference til oprindelig meddelelse Mandatory
Payload Response Event / Metering Point Domain Location / Identification	1	MktActivityRecord / MarketEvaluationPoint / mRID	An..18	1	Entydig identifikation af et målepunkt. GSRN = 18 cifre og codingScheme = A10

3.4 Meddelelsesudveksling

Alle beskeder, der kommunikerer via webinterfacet i DataHub, er XML/JSON beskeder og består af:

- En MessageHeader, som indeholder informationer, der bruges til styring af den bagvedliggende forretningsproces. Det vil sige identifikation af den enkelte besked og dens indhold og identifikation af den forretningsproces, beskeden skal behandles af.
- En eller flere Payloads (forretningstransaktioner), som hver indeholder en forretningsbesked.

3.5 Validering mod XML-skema

XML-skemaer¹ definerer indhold, struktur og typer for XML-meddelelser. Med en XSD definition er det muligt at:

- Beskrive indholdet i XML-meddelelsen
- Validere XML-meddelelsen
- Definere datafacetter (restriktioner for dataindhold)
- Definere datamønstre (dataformater)

DataHub validerer alle XML-meddelelser mod det tilhørende skema. Valideringen sker i samme webservice session, og afsender bliver øjeblikkeligt orienteret om resultatet.

Det er til enhver tid Energinet, der fastlægger, hvilket XML-skema der skal anvendes for en given XML-meddelelse.

Note: Beskeder indsendt i JSON format, vil blive konverteret til XML.

¹ XML Schema Definition (XSD)

4 Fælleskomponenter

4.1 ABIE'er

De enkelte meddelelser er dannet ud fra en fælles UML model, som består af et katalog af entiteter (ABIE). I det følgende gives et overblik over de vigtigste af disse grundentiteter. Det skal bemærkes, at den generelle implementering dokumenteres i dette afsnit. I de konkrete meddelelser vil eventuelle specialtilfælde være dokumenteret.

4.1.1 DomainLocation

I Forbindelse med Stamdata

Metering Point Domain Location	
Identification	MktActivityRecord / MarketEvaluationPoint / mRID codingScheme: A01 – EIC A10 - GLN

I forbindelse med tidsserier

Metering Point Domain Location	
Identification	Series / MarketEvaluationPoint / mRID codingScheme: A01 – EIC A10 - GLN

tabel 1 – XML Schema, DomainLocation

4.1.2 ConsumerParty

Denne klasse benyttes blandt andet til at repræsentere kunden, der kan være enten en person eller en virksomhed.

Consumer Consumer Party	
Name	MktActivityRecord / MarketEvaluationPoint / Customer_MarketParticipant / name
CPR	MktActivityRecord / MarketEvaluationPoint / Customer_MarketParticipant / mRID, where attribute PartyID_String:: codingScheme = ARR (Social Security Number) 10 cifre Kundes personnummer Indhold af felt slettes ved at indsende felt blankt med angivelse af ARR i CodingScheme

CVR	MktActivityRecord / MarketEvaluationPoint / Customer_MarketParticipant / mRID, where attribute PartyID_String:: codingScheme = VA (VAT number) 8 cifre Virksomhedens CVR nummer Indhold af felt slettes ved at indsende felt blankt med angivelse af ARR i CodingScheme
-----	--

Figur 2 - XML Schema, ConsumerParty

CPR og CVR nr. er ens i strukturen, bortset fra det tilhørende codingScheme som angiver om det er et firma eller en person.

Bemærk at felterne, CPR og CVR er gensidigt afhængige, således man kun må angive enten CPR eller CVR.

4.1.3 Energy Supplier

Denne klasse benyttes til at repræsentere elleverandøren.

I forbindelse med stamdata

Energy Supplier	
Identification	MktActivityRecord / MarketEvaluationPoint / EnergySupplier_MarketParticipant / mRID codingScheme: A01 – EIC A10 - GLN

I forbindelse med tidsserier

Energy Supplier	
Identification	Series / EnergySupplier_MarketParticipant / mRID codingScheme: A01 – EIC A10 - GLN

Figur 3 - XML Schema, Navn på type

4.1.4 Balance responsible party

Denne klasse benyttes til at repræsentere den balanceansvarlige aktør.

Balance Responsible Energy Party	
Identification	Series / BalanceResponsibleParty_MarketParticipant / mRID codingScheme: A01 – EIC A10 - GLN

Figur 4 - XML Schema, Navn på type

4.1.5 Metering grid area

Denne klasse benyttes til at repræsentere netområdet.

Metering Grid Area Used Domain Location	
Identification	Series / MeteringGridArea_Domain / mRID codingScheme: "NDK"

Figur 5 - XML Schema, Navn på type

4.1.6 Regler for angivelse af kodelisteansvarlig

4.1.6.1 Generelle regler

Der bruges et sæt af koder, der er fastlagt i kodelister. Der er forskellige kodelister – hver med en ansvarlig.

På det danske elmarked bruges 2 sæt af kodelister:

- IEC-CIM kodeliste fra ENTSO-e
- En lokal kodeliste
 - I Danmark er lokal kodeliste en kombination af flere kodelister, som vi bruger:
 - UN/CEFACTkodeliste som UN/CEFACTer ansvarlig for
 - Altid kun tal
 - ebIX-kodelisten, som ebIX-organisationen er ansvarlig for
 - Starter med E
 - en dansk kodeliste, som Energinet er ansvarlig for
 - Starter med D
 - Nordisk kodeliste, som er lavet i samarbejder med de nordiske lande
 - Starter med Z
 - De fleste koder brugt i RSM beskeder stammer fra den lokale kodeliste.

4.1.7 Identifikation af aktører

En aktør identificeres ved enten et GLN-nummer eller en EIC-kode.

Attributten `AssembledCodeListResponsibleAgencyCodeContentType` bruges til at angive, hvilken identifikation der bruges.

- Hvis `codingScheme = A10`, er der tale om et 13 cifret GLN-nummer.
 - Eksempel:
 - `<cim:sender_MarketParticipant.mRID coding-Scheme="A10">5790001330552</cim:sender_MarketParticipant.mRID>`
- Hvis `codingScheme = A01`, er der tale om en 16 tegns EIC-kode.

4.1.8 Identifikation af netområde

Et netområde er identificeret ved et 3-cifret nummer.

Attributten AssembledCodeListResponsibleAgencyCodeContentType i skemaet vist som coding-Scheme, bruges til identifikationen

- codingScheme= NDK

Eksempel

- `<cim:meteringGridArea_Domain.mRID codingScheme="NDK">244</cim:meteringGridArea_Domain.mRID>`

4.2 Identifikation af målepunkts id (aftagenummer)

Aftagenummeret er identificeret ved et 18-cifret nummer. GS1 Denmark udsteder disse. Dette angives ved attributten codingScheme=A10.

Eksempel:

- `<cim:marketEvaluationPoint.mRID codingScheme="A10">571313199988888819</cim:marketEvaluationPoint.mRID>`

Aktøren bør inden afsendelse af beskeder selv validere beskederne mod XML-skemaerne for at undgå unødige fejl.

5 Document header – IEC/CIM Market Document

5.1 Market Document contextual model

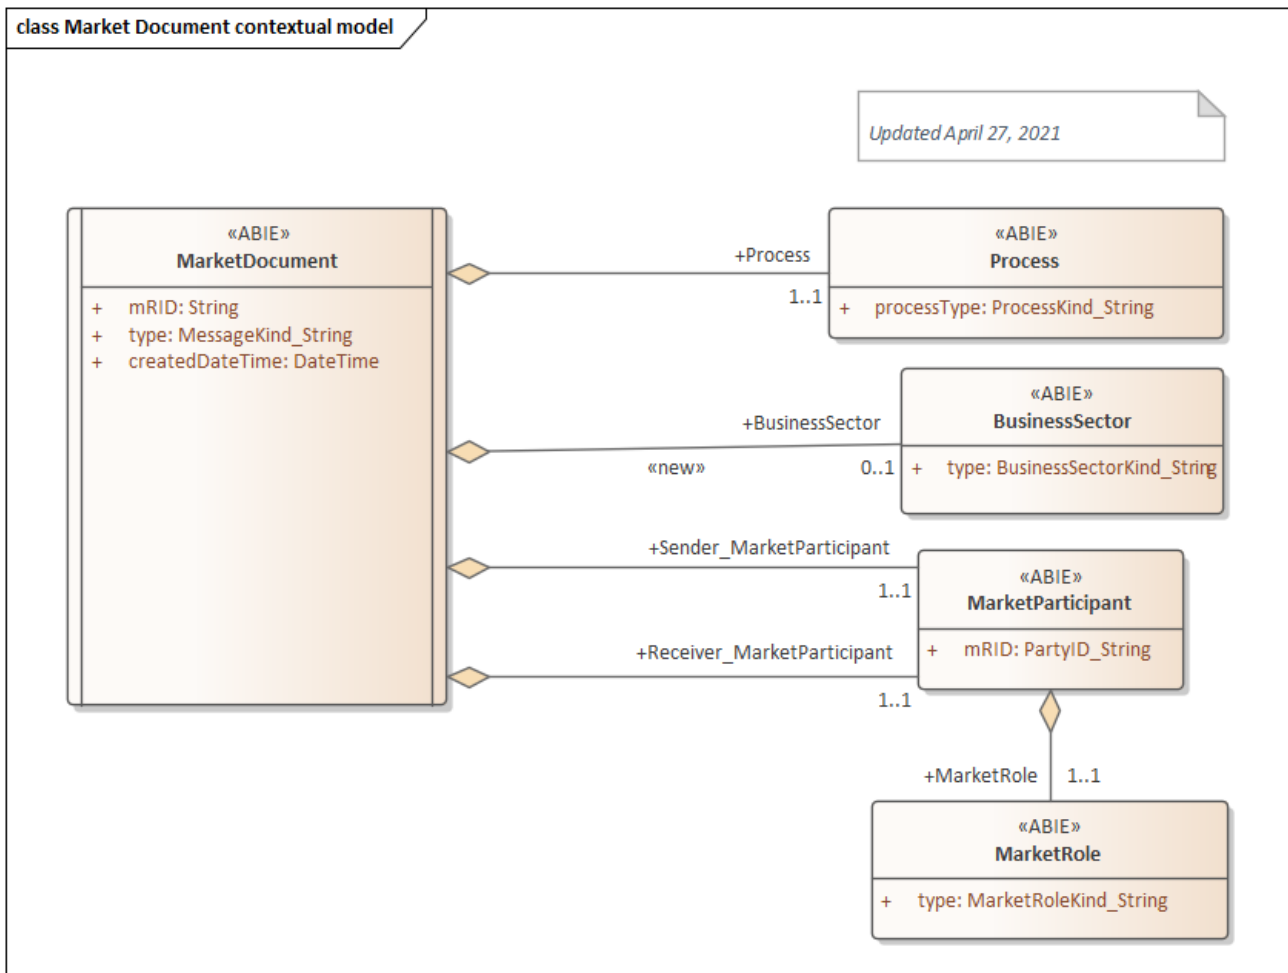

Figure 1: Class diagram: Market Document Contextual model

5.2 Market Document assembly model

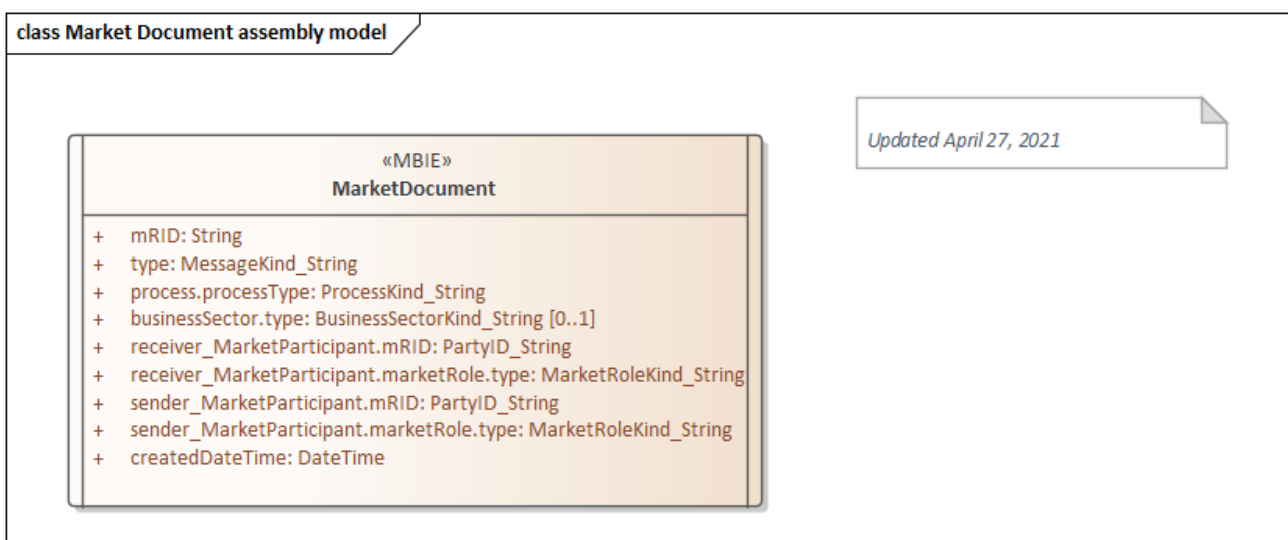

Figure 2: Class diagram: Market Document assembly model

5.3 Mapping from today's Danish document header to CIM Market Document

Danish attribute	Card	CIM attribute	Længde	Card	Remark
Header Energy Document / Identification	1	MarketDocument / mRID	An..36	1	Afsenders unikke identifikation af meddelelsen
Header Energy Document / Document type	1	MarketDocument / type	An..3	1	Bruges ikke i Acknowledgement_ MarketDocument. Dokumenttype er koden for meddelelsens navn.
Header Energy Document / Process Energy Context / Energy Industry Classification	1	MarketDocument / BusinessSector / type	An..2	1	23 Electricity Supply Industry 27 Gas Supply Industry
Header Energy Document / Process Energy Context (Energy Business Process)	1	MarketDocument / Process / processType	An..3	1	Beskriver årsag til transaktionen. Bruges ikke i Acknowledgement_ MarketDocument.
Header Energy Document / Sender Energy Party / Identification	1	MarketDocument / Sender_MarketParticipant / mRID	An..16	1	Entydig identifikation af afsender af meddelelsen. Aktøren er identificeret af et GLN-nummer eller en EIC-kode. CodingScheme = A10 angives for 13 cifret GLN. CodingScheme = A01 angives for 16 tegns EIC-kode.

Danish attribute	Card	CIM attribute	Længde	Card	Remark
Header Energy Document / Sender Energy Party / Sender Role	1	MarketDocument / Sender_MarketParticipant / MarketRole / type	An..3	1	Den rolle som afsender anvender i forbindelse med udveksling af meddelelsen
Header Energy Document / Receiver Energy Party / Identification	1	MarketDocument / Receiver_MarketParticipant / mRID	An..16	1	Entydig identifikation af modtager af meddelelsen. Aktøren er identificeret af et GLN-nummer eller en EIC-kode CodingScheme = A10 angives for 13 cifret GLN. CodingScheme = A01 angives for 16 tegns EIC-kode.
Header Energy Document / Receiver Energy Party / Receiver Role	1	MarketDocument / Receiver_MarketParticipant / MarketRole / type	An..3	1	For DataHub uses either DDZ for masterdata or DGL for measurement
Header Energy Document / Creation	1	MarketDocument / createdDateTime	Datetime	1	ISO-8601 standard anvendes. Dato og tid i UTC+0. Angiver starttidspunkt (skæringsdato) for proces. Format: YYYY-MM-DDThh:mm:ssZ

Table 1: Mapping of Market Document

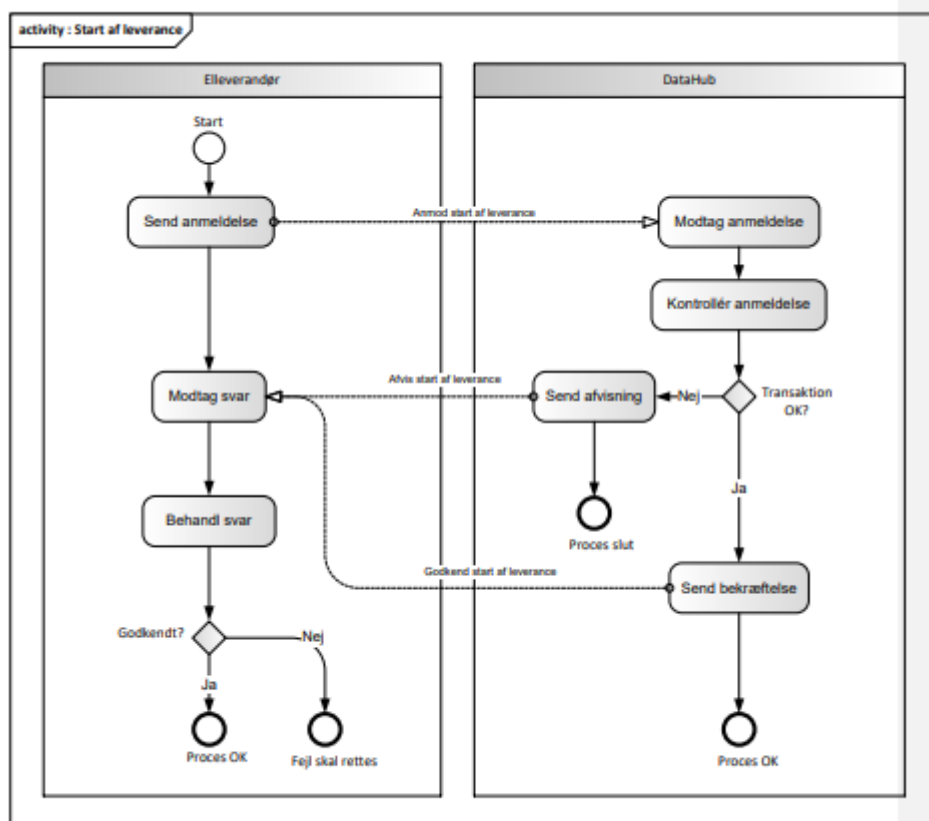

6 RSM-Beskeder

6.1 CIM based RSM 001 – Change of Supplier

Figur 6 - Use Case Diagram for Request change of supplier

6.1.1 Aktivitetsdiagram

Figur 7 - Aktivitetsdiagram for Start af leverance

6.1.2 CIM based RSM 001 – Request Change of Supplier

Forretningstransaktionen anvendes af elleverandøren til at sende en Request change of supplier til målepunktsadministratoren (DataHub).

Navn	Kode	Beskrivelse
MarketDocument / Sender_MarketParticipant / MarketRole / type	DDQ	Energy Supplier
MarketDocument / Receiver_MarketParticipant / MarketRole / type	DDZ	DataHub

6.1.2.1 Anmod start af leverance/Request change of supplier

Transaktionen startes af en Request change of supplier meddelelse (Anmod start af leverance) med MarketDocumentType 392. En meddelelse kan indeholde en eller flere transaktioner, der alle anvender den samme ProcessType. Nedenstående koder kan benyttes i Request change of supplier.

Navn	Kode	Beskrivelse
MarketDocument / type	392	Request change of supplier
MarketDocument /Process / ProcessType	E65	Customer move-in
MarketDocument /Process / ProcessType	E03	Change of balance supplier
MarketDocument /Process / ProcessType	D21	Move-in due to other reason
MarketDocument /Process / ProcessType	D29	Secondary move-in

Modtagelse i datahub

Ved modtagelse valideres meddelelsen først i forhold til skemaet og derefter i overensstemmelse med valideringsreglerne beskrevet til Request change of supplier.

I tilfælde af at der sker verifikationsfejl i forhold til skemaet eller indholdet, skal meddelelsen afvises.

Behandling af svar hos elleverandøren

Hvis elleverandøren opdager en uoverensstemmelse i en afsendt request, kan der foretages en annullering, jævnfør RSM-024 – Request Cancelation

6.1.2.2 Request Change of Supplier Contextual model

Request change of supplier indeholder udoover header (MarketDokument) en Payload klasse (MktAktivtyRecord).

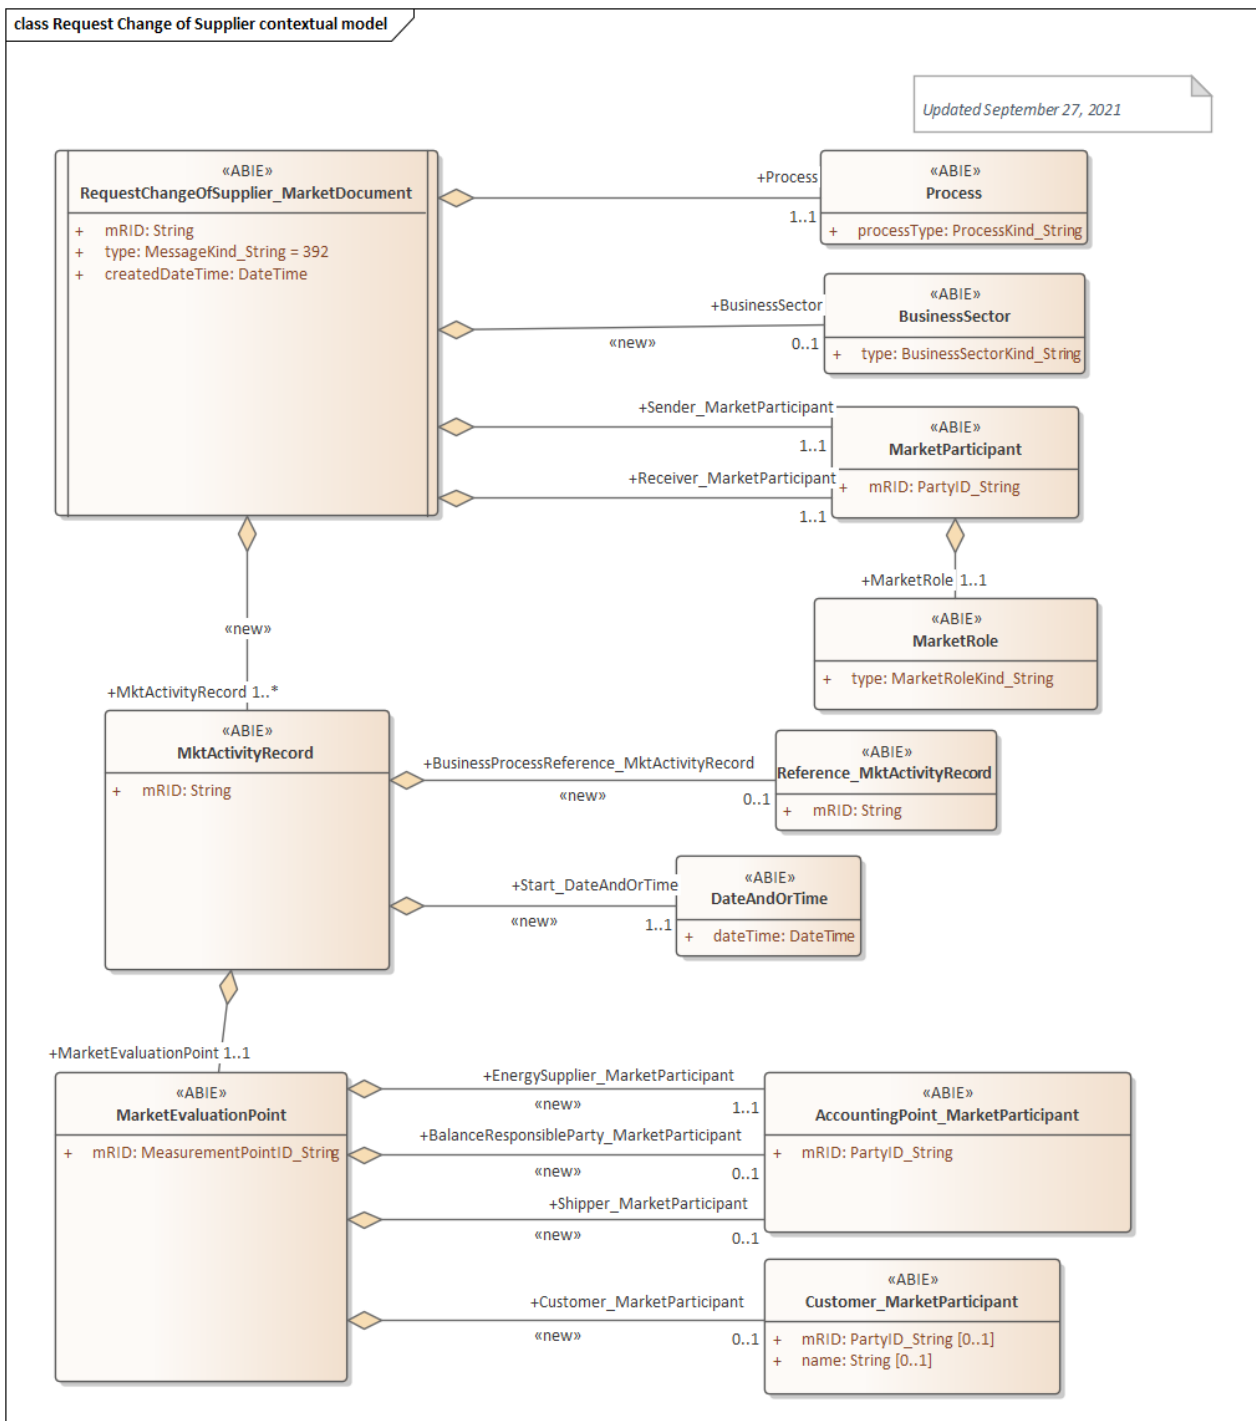

Figure 3: Class diagram: Request Change of Supplier Contextual model

6.1.2.3 Request Change of Supplier Assembly model

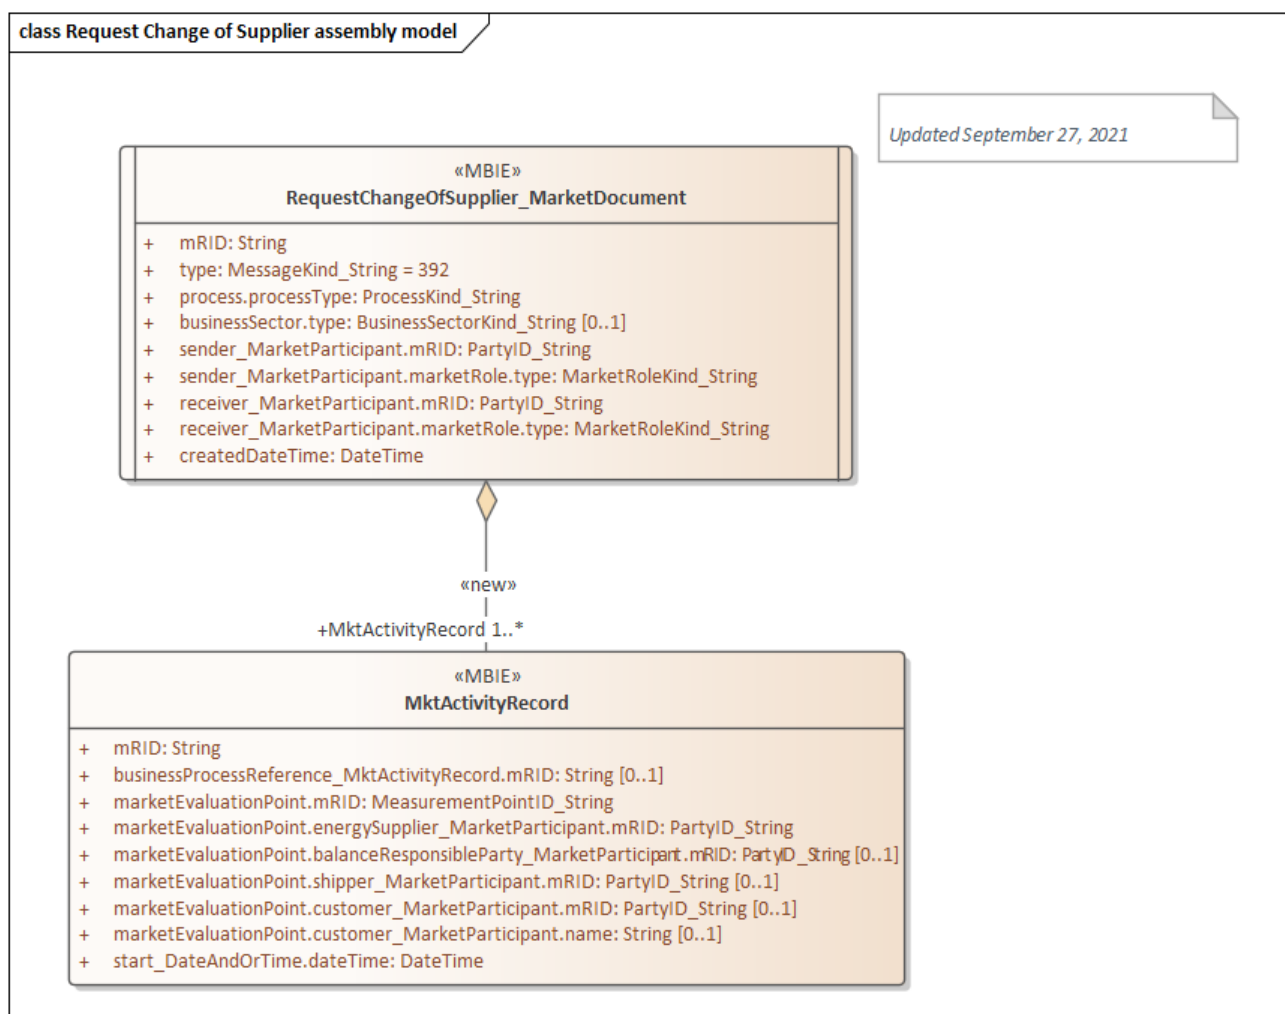

Figure 4: Class diagram: Request Change of Supplier Assembly model

6.1.2.4 Header Information

Navn	Kode	Beskrivelse
MarketDocument / type	392	Request change of supplier
MarketDocument / Sender_MarketParticipant / MarketRole / type	DDQ	Energy Supplier
MarketDocument / Receiver_MarketParticipant / MarketRole / type	DDZ	DataHub
MarketDocument /Process / processType	E65	Customer move-in
MarketDocument /Process / processType	E03	Change of balance supplier
MarketDocument /Process / processType	D21	Move-in due to other reason
MarketDocument /Process / processType	D29	Secondary move-in

6.1.2.5 Mapping from today's Danish documents to CIM document for Request Change of supplier

Danish attribute	Card.	CIM attribute	Længde	Card.	Remark
Payload MP Event / Identifikation	1	MktActivityRecord / mRID	An..36	1	Afsenders unikke identifikation af transaktionen

Table 2 RSM-001: Mapping of Request Change of supplier

6.1.3 CIM based RSM 001 – Confirm request Change of Supplier

vis der ikke opdages fejl ved kontrol af meddelelsen i DataHub lagres informationen og der sendes en bekræftelse (Confirm change of supplier) med MarketDocumentType 414 for alle de godkendte transaktioner til elleverandøren.

Meddelelsen sendes som beskrevet i klassesdiagrammet indeholdende samme ProcessType som

anmeldelsen, og godkendelsen sker ved at sætte statuskoden til A01 (approved). Herefter er transaktionen slut.

Confirm change of supplier vil altid indeholde en reference til den oprindelige meddelelse

Table 3 RSM-001: Mapping of Confirm request Change of supplier

6.1.4 CIM based RSM 001 – Reject request Change of Supplier

I tilfælde af, at der konstateres en fejl i forhold til forretningsregler, skal transaktionen afvises.

Dette sker med meddelelsen Reject change of supplier med DocumentType 414.

Meddelelsen sendes som beskrevet i klassediagrammet indeholdende samme ProcessType som ianmeldelsen, og afvisning sker ved at sætte status kode til A02 (Rejected) og Reason sat til den relevante kode fra forretningsreglerne.

Reject change of supplier vil altid indeholde en reference til den oprindelige meddelelse.

Modtager elleverandøren en Reject change of supply kan denne efterfølgende rette sit system og sende en ny Request change of supplier for målepunktet.

Behandling af svar hos elleverandøren

Ved modtagelse hos elleverandøren af en Reject request Change of Supplier kan elleverandøren validere meddelelsen i overensstemmelse med skemaet rejectrequestreallocatechangeofsupplier-0-1

Table 46 Mapping of RSM-035: Reject Request Price List

7 Kodelister

Koder til attributter, som bruges i forbindelse med de enkelte RSM-beskeder vil ikke blive vist i dette dokument. De vil i stedet kunne findes i excel arket "kodelister DH3". Tilladte værdisæt af en kodeliste kan være begrænset i hver enkelt meddelelse ud fra et forretningsmæssigt perspektiv. I excel arket vil det være muligt at bruge filtre til at kunne vise, hvilke attributter og koder der kan bruges i den enkelte meddelelse. Arket findes på energinets hjemmeside.

7.1.1 Væsentlige ændringer fra DH2 til DH3

Reject/confirm

I DH3 benyttes A01 og A02 frem for 39 og 41

Kode	Beskrivelse	Benyttes i
39	Approved	DH2
41	Rejected	DH2
A01	Message fully accepted	DH3
A02	Message fully rejected	DH3

Quality

Missing Quantity har nu fået en kode i Quality fremfor at have sin egen attribut(A02), derudover er tilføjet en ny kode (A06) til status beregnet.

Kode	Beskrivelse
A01	Adjusted
A02	Not available
A03	Estimated
A04	As provided
A05	Incomplete
A06	Calculated

Identifikation af GLN/EIC

Her skiftes til koderne fra ENTSO-E

Kode	Beskrivelse
A01	EIC
A10	GS1

SM = Skabelon manuel, SF = Skabelon fjernafkast, TF = Time eller Flex

1) For grp6 - kun 1 dato angives

2) Skal kun medtages for forbrugs- og produktions-målepunkter, hvor nettoafregning er forskellig fra gruppe 0

3) kun for målepunktsart lig fysisk

4) Enten fuld adresse eller ingen

8.1.8 Håndtering af opdatering af stamdata til og fra DataHub

Hvis et tekstfelt skal slettes, sker dette ved indsendelse af en "blank" attribut.

Opdatering af kontaktinformation sker ved indsendelse af de nye værdier. DataHub fjerner de eksisterende værdier og opdatere med indsendt indhold.

9 Data definitioner

Henvis til RSM guide for eBIX og for cim til de enkelte RSM beskrivelser

10 Generelle meddelelsesregler

10.1.1 Tids-, dato- og periodeformater

Begreber og anvendelse:

- UTC: Universal Time Coordinated. I praksis er UTC det samme som GMT (Greenwich Mean Time).
- Lokal tid: Den lokale tid.

Ved udveksling af EDI-meddelelser (XML) i Danmark anvendes UTC+0 (der anvendes ikke lokal tid). Aktørernes egne it-systemer skal være i stand til at håndtere modtagelse af forskellige offsets til UTC.

10.1.2 Normaltid / sommertid

I EDI-meddelelserne anvendes det samme offset fra UTC året rundt.

UTC+0	Normaltid i Danmark	El	Døgnet går fra kl. 23:00 til næste dag kl. 23:00.
	Sommertid i Danmark	El	Døgnet går fra kl. 22:00 til næste dag kl. 22:00.

Skiftet til sommertid sker sidste søndag i marts, mens skiftet tilbage til normaltid gennemføres sidste søndag i oktober. Døgnet med skift til sommertid indeholder 23 timer. Døgnet med skift til normaltid indeholder 25 timer.

10.1.3 Notation og perioder

Alle dato / tidsformater angives på følgende måde:

Format	Syntaks	Note	Eksempel
XML	YYYY-MM-DDTHH:MMZ	Forklaring til format. "-", ":" og "T" er separatorer, og "Z" angiver ingen offset til UTC tid (UTC-0)	2007-02-24T23:00Z

10.1.4 Tidssynkronisering

Det er et krav, at it-systemer, der danner og behandler meddelelser, ikke afviger mere end +/- 1 minut fra lokal tid.

10.1.5 Regler for afrunding, tal og decimaler

Afrundingsregler

Der anvendes de almindeligt gældende regler for afrunding. Værdier under 5 rundes ned, og værdier på 5 og derover rundes op. Restværdi som følge af afrundingen ignoreres.

10.1.6 Separatorer og tal

- Punktum (.) benyttes som decimalseparator. Indgår der decimalseparator i en værdi, skal der som minimum være ét tal foran og ét tal efter separatoren. Fx er det ikke tilladt at sende (.5), det skal sendes som (0.5).
- Decimalseparator må kun benyttes som angivet i de pågældende markedsforskrifter.
- Tusindtals separator må ikke anvendes.
- En numerisk værdi må ikke indeholde specieltegn.

10.1.7 Karakterer

- Hvis en værdi har foranstillede nuller (0), sendes disse ikke.

Foran- og efterstillede blanktegn sendes ikke. Fx hvis et felt har 20 karakterer til rådighed, men kun 5 karakterer bliver brugt, sendes kun de 5 karakterer.

10.2 Håndtering af delegering

Generelt kan aktører ikke delegere kommunikation til DataHub, dvs. tillade en anden aktør at indsende data til DataHub på vegne af den pågældende aktør selv.

En undtagelse findes for indsendelse af måledata. En aktør kan selv kommunikere måledata med DataHub eller overlade dette til en anden aktør.

10.2.1 Kommunikation til DataHub

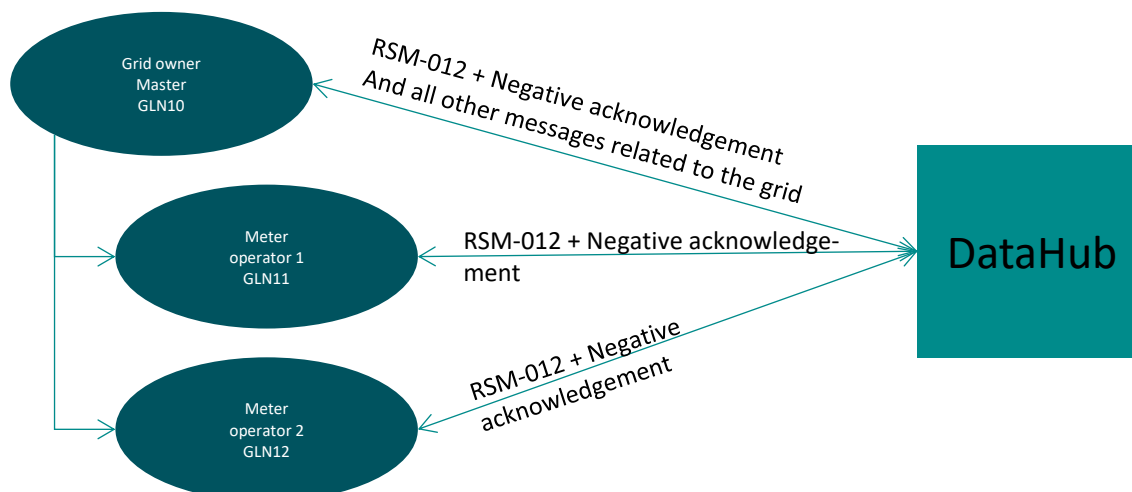

En netvirksomhed kan have flere måleoperatører tilknyttet et netområde.

At autorisationen bliver udført på netområde niveau, betyder at en måleoperatør kan indsende målinger for alle målepunkter i et netområde, hvor måleoperatøren er delegeret myndighed.

Netvirksomheden skal angive, om den ønsker at anvende måleoperatør ved indsendelse af meddelelser. Aktøren skal i så fald angive navn og GLN nummer for den eller de måleoperatører, der ønskes anvendt pr. netområde. En netvirksomhed kan have flere måleoperatører tilknyttet et netområde. Delegeringen sker pr. netområde, hvilket betyder, at en måleoperatør kan indsende målinger for alle målepunkter i dette netområde.

Det er kun følgende RSM'er, der kan uddelegeres til indsendelser til DataHub'en:

- RSM-010: Fremsend diverse forbrugsopgørelser
- RSM-011: Forbrug for skabelonafregnet målepunkt samt tællerstand
- RSM-012: Fremsendelse af måledata for et målepunkt

Enhver måleoperatør kan kommunikere med DataHub, hvis de er delegeret myndighed.

Efter at have sendt en meddelelse vil afsenderen (måleoperatøren) modtage et direkte svar fra Webservice (godkendt/afvist). Ud over dette svar er den eneste meddelelse, en måleoperatør kan modtage, en afvisningsbesked for RSM'n eller en negativ acknowledgement (RSM-009).

DataHub vil altid sende en RSM-009 meddelelse til den fysiske afsender.

Hver aktør i markedet har sin egen kø, som er identificeret via aktørens GLN-nummer. Dette betyder, at hvis en måleoperatør indsender på vegne af flere netvirksomheder, vil alle meddelelser til måleoperatøren blive placeret i én kø.

Hvis en aktør har flere forskellige systemer til indsendelse af meddelelser, er det aktørens eget ansvar at distribuere disse meddelelser internt.

10.2.2 Kommunikation fra DataHub

Aktører kan delvist delegerere kommunikation fra DataHub, dvs. tillade en anden aktør eller måleoperatør at modtage data fra DataHub på vegne af den pågældende aktør selv. Delegeringen sker pr. RSM, men det er kun muligt at vælge én modtager for udvalgte RSM meddelelser.

Delegering sker gennem en opdatering af aktørens oplysninger i stamdataregistret og der skal angives navn og GLN-nummer <https://www.msn.com/da-dk/feed> på modtageren af de RSM'er, som aktøren ikke selv ønsker at modtage. Der kan kun være en modtager pr. RSM.

Der vil være følgende muligheder for at uddelegere modtagelsen jævnfør tabel:

RSM	Navn	Årsag	Ansvarlig aktør
RSM-012	Fremsend måledata for et målepunkt	E30	EL
RSM-012	Fremsend måledata for et målepunkt	E23	EL/NV
RSM-014	Fremsend beregnede tidsserier	D03	NV/EL/BA
RSM-014	Fremsend beregnede tidsserier	D04	NV/EL/BA
RSM-014	Fremsend beregnede tidsserier	D05	NV/EL/BA
RSM-014	Fremsend beregnede tidsserier	D09	NV/EL/BA
RSM-014	Fremsend beregnede tidsserier	D32	NV/EL/BA
RSM-018	Fremsend hullerlog	D25	NV
RSM-018	Fremsend hullerlog	D26	NV
RSM-019	Fremsend beregnede engrosydeler	D04	NV/EL
RSM-019	Fremsend beregnede engrosydeler	D05	NV/EL
RSM-019	Fremsend beregnede engrosydeler	D09	NV/EL
RSM-019	Fremsend beregnede engrosydeler	D32	NV/EL

Anvendte forkortelser:

- EL: elleverandør
- BA: Balanceansvarlig aktør
- NV: Netvirksomhed
- MO: Måleoperatør

Funktionalitet for udveksling af RSM-014 sker gennem opdatering af aktørens oplysninger, hvor der skal angives navn og GLN-nummer på de RSM'er, som aktøren ikke selv ønsker at modtage. Der kan kun være en modtager pr. RSM pr. forretningsårsagskode.

Anmodninger om data:

- RSM-015: Anmod om måledata
- RSM-016: Anmod om aggregerede måledata
- RSM-017: Anmod om engrosydeler

Disse RSM'er anvendes når en aktør (netvirksomhed, elleverandør, måleoperatør, balanceansvarlig aktør) ønsker at anmode om måledata. Anmodningen kan anvendes af både aktøren i de situationer, hvor RSM er uddelegeret til en anden aktør og af måleoperatøren, som RSM er delegeret til. Modtageren findes ud fra anmodning og ikke via RSM.
