

Updated implementation guide and integration testing

Updated BSP implementation guide

10. January 2021 "*BSP implementation guide – aFRR capacity market v2.4*" was published on www.nordicbalancingmodel.net. Due to a defect found in integration testing, a new version of the guide has been published (v2.5).

You can find the updated version and example xml files here:

<https://nordicbalancingmodel.net/updated-version-implementation-guide-afrr-capacity-market-bsp-2/>

The latest change is that ***accepted bids are now sent using ReserveAllocationResult_MarketDocument.***

Integration testing with Nordic solution

We are still looking for BSPs to participate in integration testing with the Nordic solution. The only prerequisite is that the latest version of the BSP implementation guide (v2.5) has been implemented. The testing will be performed in week 15 and 16 (2021).

For those of you who have already agreed a date for integration testing (based on v2.4), have to comply with the new version of the guide (v2.5) before performing the test.

Please contact your TSO if you want to participate, or for any questions, using the following contact details:
